" Regarding claims 1 and 36-38:

a linkage which connects the vane member to the rotor so as to keep the tip face of the vane member in sealing contact with the external surface of the rotor, the linkage being connected to the vane member by an articulation having an articulation axis such that a plane containing the articulation axis and the axis of the external surface passes through the region sealing contact;

wherein the rotor comprising a rotating inner part and a non-rotating outer part;

wherein said non-rotating outer part has a shallow arcuate recess which receives the arcuate tip face of the vane member;

wherein the linkage comprises an appendage connected to said non-rotating outer part at a location between the vane member pivot axis and said arcuate recess and connected to the vane member by said articulation; and

wherein said passageway traverses the vane member between the arcuate tip face and the pivot axis of the vane member.

Regarding claim 34:

Including all limitations of claims 1 and 36-38 above, and further including:
